JavaScript for Instructional Designers — building modern visual effects & interactivity in Articulate Storyline

FORMAT	Self-study, text-based course hosted on Notion (browser, desktop app, or mobile)
DURATION	Self-paced; guaranteed access to materials for at least 1 year
AUDIENCE	Instructional designers, e-learning designers & developers working in Articulate Storyline
PRIOR CODING EXPERIENCE	None required — the course is built for complete beginners to JavaScript
REQUIREMENTS	Free Notion account, Articulate Storyline license, a computer/laptop
SUPPORT MODEL	Independent, self-guided study. No live sessions, 1:1 coaching, or Q&A included

What the course covers

Most JavaScript courses are built for general web development. This course is different: it teaches JavaScript specifically as it applies inside Articulate Storyline, so every concept is taught through a real Storyline scenario rather than abstract theory. The course is organized around a repeatable four-step framework for building any visual effect or interaction:

1

Identify the object

2

Define its state & properties

3

Select the method of change

4

Build the controlling logic

Course structure

Section 1 — JavaScript as a Language. A short orientation module covering how the browser, HTML, CSS, the DOM and APIs relate to JavaScript, and where Storyline fits into that picture.

Section 2 — A Practical System for Using JavaScript in Storyline. The core of the course: the four-step framework applied to a progressive series of real Storyline builds (menus, carousels, and other interactive components), with theory and a working example on every lesson page.

Learning outcomes

- Design and build custom interactive elements in Storyline with intention, rather than trial-and-error experimentation
- Translate a design idea directly into working JavaScript logic, step by step
- Read, adapt, and troubleshoot code — including code drafted with AI assistance — with genuine understanding of what it does
- Standardize and reuse code to build a personal library of interactive components for future projects

About the instructor

Natalia Vostretsova

Manager, developer & e-learning designer

Natalia specializes in pushing past the default visual and interactive limits of Articulate Storyline. The course distills over a year of hands-on R&D into a structured, teachable system.

Who this course is for

- Already manage full course builds in Storyline
- Have no prior coding background
- Want to move beyond Storyline's built-in triggers and motion paths
- Are ready for focused, independent, hands-on study

Not designed for

Learners already experienced with JavaScript/DOM/APIs, those seeking copy-paste templates, a full general-purpose JavaScript curriculum, or an instructor-led format with live coaching.

Access & delivery

Access is granted manually within 24 hours of payment via a Notion guest invitation. No refunds, as full course materials are delivered immediately upon enrollment.
